

Molten Splash-Away™ Curtain

...

This extremely flexible and heavy duty high temperature MSA Curtain offers metal melters, producers, smelters, casters, refiners and fabricators a high quality versatile product to defend against molten splash problems.

Worbo Technology

- Manufactured and designed with 100% Non-Conductive materials specifically for safe non-arcing use in close proximity to AC or DC EAF's.
- The hydrophobic, low surface energy, non-stick properties of the thick silicone coating will shed large random but potentially hazardous amounts of 3000°F molten metal splash to protect equipment or people.
- This curtain is ideal for use in severe heavy duty welding/cutting/gouging applications.
- Combination of heavy duty silicone shield coating on thick high temperature fiberglass substrate helps insulate and defend against intermittent bouts of flame impingement, burning airborne debris and high temperatures.
- Worbo offers a wide variety of hangers and fasteners to facilitate easy removal and re-installation of the *MSA Curtain*. These fasteners include grommets, turned over rod pockets, ¼ turn fasteners, hook and loop (Velcro®), snaps, etc.

Dimensional Data

MSA Curtains are extremely heavy duty at ~ 100oz/yd² and is available in virtually any size and dimension.

Temperature

Base weave of heavy fiberglass is rated to 1100°F (590°C) continuous, heavy smooth silicone shield coating will protect against short duration temperature extremes of 3000°F (1648°C) and 500°F (260°C) continuous.

Environmental Resistance

Excellent resistance to ozone, oxidization, UV, corona, cosmic radiation, ionizing radiation and weathering in general.

Flammability

Non-flammable – Self extinguishing.
